I'm a web developer currently living in Somerset, England.

I always want to create honest, well-designed bespoke websites and emails from scratch. I use a variety of tools, frameworks and languages to achieve this goal.

I like to keep my email inbox at zero. I review all of my projects weekly to ensure my next steps are clear. I hit my deadlines by maintaining a thorough to-do list and promptly addressing any blockers.

Web Developer, Opia Ltd. 2016–2017, 2018-Current.

We run promotions, competitions and giveaways for some of the world's leading brands. At Opia, I champion leading frontend tech and design to build responsive, dynamic web applications for our clients. I also regularly create responsive email campaigns. Our clients include Google, LG, Microsoft, HP, Dell, Huawei, Samsung, Lenovo and more.

Lead Frontend Developer, Drew London. 2017–2018.

I used PHP (WordPress), Blade (Shopify), SASS & Javascript to instigate HiDPI, responsive, pixel-perfect websites for their clients. I worked primarily for clients Drugline, Emmy London & STL Partners.

Web Designer / Developer, Sleeky Web Design & Print. 2016.

I built websites from end-to-end: designing them in Photoshop, then building with PHP (often WordPress or Opencart), CSS & HTML. I also wrote blog posts and SEO copy for the agency and their clients.

Frontend Javascript (Vue, ES6, jQuery), HTML5, CSS3, Responsive Email (Foundation, MJML), SASS, Bootstrap (3 & 4), WordPress, JAM Stack (Jekyll, Gridsome, Netlify), Templating (Twig, Blade).

Backend PHP (5.6 through 7.4), Laravel, REST APIs, MySQL.

Testing phpUnit, Cypress, ESLint.

Server LEMP/LAMP (DigitalOcean), DNS, Docker, Vagrant.

Design Adobe (Photoshop, InDesign, Illustrator), Sketch.

I also enjoy public speaking, writing, podcasting, DJing, making cocktails, video editing, tennis and collecting music.
